Chess world championship: 'Interzonal' culmination

The interzonal stage of the chess world championship has reached its culmination, as the men's second tournament of a total three is drawing to an end in the Mexican town of Taxco, and the first of the two planned women's tournaments continues in Zelenograd in the USSR.

Grandmaster Jan Timman of Holland won the first of the four passes in Taxco for the next stage of the competition, the challengers' tournament due this October in Montpellier, France. He did that with three rounds still to go, totalling 9.5 points from 12 rounds.

The other three passes are being contested by Jesus Nogueira of Cuba and Kevin Spragg of Canada with eight points each, as well as Mikhail Tal with seven points and one game to go.

Six rounds of 15 have been played in Zelenograd with the most advanced held by the most youthful entrant, Soviet champion Svetlana Matveyeva. There are another four Soviet entrants in the tournament. Unlike the men, the women vie in only three passes in each interzonal.

Meanwhile the third men's and second women's interzonal are getting under way in the Swiss town of Biel and on Cuba, and the USSR will attend both events.

His engine failed

Leningrad Andrei Bernilay has won the title of the world's second-champion in motorboat racing (350 cu cm scooter class).

At the competition held in Boretta (Italy) Andrei was leading after three heats, and it seemed nothing would hinder him from mounting to the highest step of the winners' podium. However in the last (fourth) heat, his scooter engine broke down, and the race was won by Manfred Loth of West Germany.

Soviet racers entered the contest after a break of two years.

Bitisa invites you

Major competitions are again taking place in the Bitisa Olympic equestrian sports complex.

This time it is the USSR championship in dressage and show jumping. The contest, which will end on June 30, begins with the "minor" prize for riders specializing in the high school riding, and two elimination show jumping rounds for the masters in obstacle clearing.

This is the second and first stage of the USSR horse-riding cup. The first stage took place in Stavropol, where gold medals were given to the representatives of the classical Olympic three-day equestrian event.

Sails catch the wind

Sailing is a dear avocation. But in the USSR yachts are acquired by sports societies and yacht clubs and are offered to yachting free. This is why this sport enjoys great popularity in this country and precisely in this country it is really accessible and democratic.

Lately Moscow yachtsmen, apart from racing Olympic class yachts, have shown growing interest in cruiser yachts boasting great seaworthiness and having all things needed for lengthy voyages over vast distances.

Moscow yachtsmen enter many annual events. Thus, the 8th Spring Regatta of cruiser yachts for the Lida Onnops Cup and the Sovetskaya Rossiya newspaper prizes. Ending the season in late September will be the Paris-85 Cruiser Regatta on the Soviet reservoir.

The 1970s and the 1980s have been the years of tourist boom. The summer holiday or the days off spent travelling, hiking or on an excursion mean physical hardening and vast possibilities to see monuments of history and architecture, or simply to stay alone in a natural setting. It is hardly surprising that the number of people who prefer this kind of rest, particularly in the cities, has been growing with every passing year.

Tourism in this country is the responsibility of the Trade Unions. The Central Council on Tourism of the All-Union Central Council of Trade Unions offers a number of routes. One may choose any kind of tourism, whether walking, motorcycling, sailing, cycling, riding on horseback or on sledge trains. One can go travelling by plane, rail or bus, and even rafts. Trade unions offer tens of millions of tourists and hikers the use of tourist bases, hotels, and camping sites.

This year, there are 165 national and 815 local routes at the disposal of people fond of travelling.

Many people, particularly the young, are attracted by non-organized amateur travelling. Such people are united in special tourist clubs. Amateur travellers have more than 14 thousand routes.

ROUTES OF DISCOVERIES

Fertilizer from steel smelting converter

Soviet experts have offered to use as mineral fertilizer the slag obtained during the processing of phosphorous pig iron in 300-tonne converters.

The steel plant in Korgando, Kazakhstan (a republic in the south of the USSR), has specially tested such conditions of smelting and the compound of pig iron from which not only high-grade steel can be obtained but also slag to serve as valuable fertilizer.

It has been established that on to its chemical composition (it is rich in phosphorus) slag can be regarded as combined fertilizer which also contains calcium, magnesium, manganese, vanadium, chromium and sulphur with insignificant concentrations of foreign matter. Of course, fertilizers are used depending on the type of soil and climatic conditions.

As a test crop on acidic soils the foreign perennial rye grass was used. On various plots the yield of green mass increased two, five and even eleven times. On certain chestnut-colour soils Thomas eggs were applied to tomatoes and this, too, considerably increased the harvest.

NOVELTY IN SOVIET MACHINE-TOOL INDUSTRY

Micro-ChPU — a new system of programmed control of machine-tools — offers an operator any of the 99 various programmes for machining parts.

The replacement of former control attachments by this module microprocessor system noticeably increases the reliability of the entire technological complex, makes it possible to step up the productivity of the equipment. The use of this system makes easier the setting up of large sections with programmed-control machine tools.

The new system has stood the test of reliability: it runs for more than 5,000 hours continuously during tests operating without any errors and failures.

new system. On its basis they will develop systems for controlling industrial robots and automatic depots. The expediency of this project is proved by a number of its advantages. Among them is the selection of any of the 99 programmes and putting it into operation from the control desk or in a centralized way, for example, from the computing centre of an enterprise or a shop.

The new system has stood the test of reliability: it runs for more than 5,000 hours continuously during tests operating without any errors and failures.

FROM the SOVIET PRESS

FROM EXTENSIVE TO INTENSIVE ECONOMY

Extensive economy implies broadening production areas and increasing labour and material resources. This marked the preceding stage of the economic development in this country, which continued until the beginning of the 80s. Thus, the main industrial assets over the past 10-12 years increased roughly twice while industrial output nearly doubled over the same period.

Yet this path of development encounters difficulties which are increasingly felt, writes the *NAUKA I ZNIZH* (Science and Life) magazine. First, the country can no longer draw into the economy so much manpower as before. Its increase this year, owing to the "secondary echo" of the war (decreasing birth rates in the war years) will amount to only 400,000. This, therefore, raises the acute question of using indicators which might fully or partially compensate for the unavoidable labour savings, wider use of mechanization and automation, as well as new technologies. The essence of transition to intensive economic development is that new increases in manpower cease to be an important factor of production growth, the magazine concludes.

The main emphasis is on all-round increase in productivity. Greater output of mineral and other natural resources is also excluded from among the critical factors of economic growth: the emphasis now is on more effective and rational utilization of the available resources by factories.

LAND IMPROVEMENT IN RUSSIAN FEDERATION

In the Russian Federation there are 10.5 million hectares of improved land. In the two past five-year periods they accounted for the entire increase in plant-growing output.

Taking this into account, the Ministry of Education of the Russian Federation has devised a programme for the development of experimental productive test for colleges and universities during the Twelfth Five-Year Development Plan period. It provides for the creation of universities and other educational establishments of experimental industries, teaching, research, training and practical centres, computing centres for collective use, etc.

The programme for cooperation between science and industry provides for the creation of enterprises, research centres, computing centres for collective use, etc.

TEST-TUBE ANIMALS?

There is a belief that progress in science and industry can kill living nature. It is high time that a great look this side of nature and protect it, writes Professor G. M. Baranov, a well-known biologist in the newspaper *SOTSIALISTICHESKAYA DUSTRIYA*.

Man has not as yet learned to think of the consequences of his activities for the environment. Over the past four centuries nearly 150 species of animals and birds have disappeared from the face of the Earth. It is more than a half of this number, within the past 50 years alone because of man's interference. Today man must stop in to save the endangered species.

The designing of land improvement systems is necessarily preceded by feasibility studies and schemes for comprehensive use and protection of water resources, the author points out.

Its increase this year, owing to the "secondary echo" of the war (decreasing birth rates in the war years) will amount to only 400,000. This, therefore,

raises the acute question of using indicators which might fully or partially compensate for the unavoidable labour savings, wider use of mechanization and automation, as well as new technologies. The essence of transition to intensive economic development is that new increases in manpower cease to be an important factor of production growth, the magazine concludes.

The main emphasis is on all-round increase in productivity. Greater output of mineral and other natural resources is also excluded from among the critical factors of economic growth: the emphasis now is on more effective and rational utilization of the available resources by factories.

SCIENTIFIC POTENTIAL OF COLLEGES

The newspaper *PRAVDA* writes that colleges and higher education institutions in the Soviet Union possess a tremendous scientific potential. About one-third of the country's scientists and nearly 50 per cent of candidates and doctors of science are working in the system of higher education. Colleges and universities offer their facilities for training 60 out of every 100,000 postgraduate students.

Higher schools have an extensive network of scientific research laboratories as well as design and development bureaux and 111 scientific research institutions.

ENTERTAINMENT

PROFILES

YEVGENY LAZAREV

His main idea was that I normally did not like the way they produced the plays in which I played roles; I tormented myself and the director, always arguing with him in attempt to prove my point... So as once Oleg Yafremov, chief director of the Moscow Art Theatre, said: if you disagree once, twice, thrice... then it's all clear you should do some directing yourself.

His first independent attempt was Shakespeare's "Hamlet", which drew a cast from various Moscow theatres, mostly students from the same graduate class as Lazarev at the Moscow Art Theatre training school. The play ran only twice, but its tremendous success was very important, for it gave Lazarev hope and confidence.

And now he had his "own" theatre. To direct and to be director is not synonymous. The latter is a super profession, Lazarev contends, and should combine lots of talents — those of director and organizer, diplomat and educator. The very personality of a man capable of leading a group should be conspicuous.

When I was appointed, says Lazarev, many sincerely advised me to keep my distance. Honestly, I reject such an attitude and I am sure that in a collective you have to win authority and the right to lead primarily with hard work. Appropriately I started my work at this theatre not with talks and samplers but concrete work.

In his first season he produced two plays dedicated to the 40th anniversary of the Victory of the Soviet people over German fascism. "Who Are You, Old Men?" by Boris Vasiliev and Konstantin Stanislav's "Soldiers Are Not Born", both authors are war veterans, they know the war and from stories and write about things they witnessed themselves. One play is about people who fought and died and the other about veterans who saw the whole war through — our dear "old men" and their present lives.

He is now rehearsing a new play, "A Detective of the Stone Age", based on two plays by noted Soviet playwright Alexander Volodin — "Two Arrows" and "A Desman"; he is also planning to stage the "Wounded Roast", a play by young playwright Sergei Kostylev, dealing with the life of great Russian actress, Mikhaila Lomonosov, and a stage version of Fyodor Abramov's "Yar".

The Theatre in Malaya Bronnaya primarily deals with socio-satirical problems. That is how Lazarev defines the artistic profile of his company.

Natalya KUROVA

Is it possible to perform before an audience from 150 countries in 8 days? It appears possible if the spectators are participants and guests of such an immense international forum as the 12th World Festival of Youth and Students, which will soon open in Moscow. By the number of represented countries only a session of the UN General Assembly may eclipse it.

Among the theatres participating in the cultural programme of the Moscow Festival is the Bolshoi of the USSR. Besides regular performances, the actors of this world-famous

BOLSHOI THEATRE'S FESTIVAL BILLBOARD

will dance at the Soviet date-gate's gala concert and on many other occasions.

Of course, 8 festival days are not sufficient to show everything we perform on our stage, says leading Bolshoi soloist, Boris Aksinov. That is why we are trying to compose the repertoire in such a way as to enable the audience see various works — classics, modern performances and different generations of actors — acknowledged masters and quills young dancers, like last year's graduates of the Moscow Choreographic School.

KAZAKH FOLK ENSEMBLE FOR FESTIVAL

The Kazakh Republic song and dance ensemble has won the honour to participate in the cultural programme of the 12th World Festival of Youth and Students soon to be held in Moscow. During their many performances in various parts of our country and abroad, the collective, which celebrates its 30th anniversary this autumn, familiarizes fans with traditions of folk art and the original art of Kazakh songs and dances. At the 6th Moscow World Festival held in 1957, the ensemble won an award while its choreographic group was presented with a silver medal. For the forthcoming forum the group has prepared an original programme of the best folk songs and dances as well as works by contemporary composers and choreographers.

A scene from the lyrical dance "Brides".

Stages don't stand idle

The theatrical season is coming to an end in Tbilisi (the capital of the Georgian Soviet Socialist Republic), but the stages will not be empty. The Dnizhba (Friendship) theatre offers many concerts and performances for art lovers.

It will be a creative soiree of popular brother-actors Iuri and Vladimir Solomin, Yevgeny Vassiliev, Mikhail Kozakov and Andrei Myagkov.

NEW EDITION OF MAHABHARATA

The Detkash Literatury Publishers of books for children have come out with a second Russian edition of Mahabharata in one hundred thousand copies.

Written three thousand years ago, the Indian epic still strikes with its grandeur and beauty.

It consists of eighteen volumes, or nearly two hundred thousand lines. Considerable effort in preparing the epic for publication was done by Nadejda Gusova, Doctor of Historical Sciences, who edited the poem for Soviet readers. From numer-

ous episodes she chose those which are well known in India, where for thousands of years poets, artists and sculptors have been drawing inspiration from this work.

The book includes 60 illustrations about Rama's exploits, his faithful wife Sita, as well as Sakuntala, Dushyanta and other Indian epic characters. It was designed and illustrated by Oleg Zotov on the basis of ancient Indian miniatures, frescoes and other monuments of art.

An exhibition of Viktor Oreshnikov has opened in the premises of the USSR Academy of Arts at 21 Kropotkinskaya Street (Moscow). The items on display include his well-known paintings and portraits of our contemporaries, prominent scientists and the arts.

FILMS

Mystery of the Golden Mountain (Sverdlovsk Film Studio, USSR). A real historical fact lies at the core of the film: the secret of the rich coal deposit of "combustible stone" (coal) in

BUSINESS

Meeting in Warsaw

The Soviet-Polish Intergovernmental Commission on Economic, Scientific and Technological cooperation recently held its 10th meeting in Warsaw to implement the Long-Term Cooperation Programme for the period up to the year 2000. Special emphasis was laid on the issue of strengthening technological independence from the West. An agreement on joint production and mutual delivery of components for hydraulic self-propelled cranes, as well as other road-building and mineral machines was signed between the two governments for the period up to the year 2000.

The book includes 60 illustrations about Rama's exploits, his faithful wife Sita, as well as Sakuntala, Dushyanta and other Indian epic characters. It was designed and illustrated by Oleg Zotov on the basis of ancient Indian miniatures, frescoes and other monuments of art.
